Landlord/Property Manager Miscellaneous Functionalities
What is two-factor authentification (2FA) and how do I enable it on my account?

Two-factor authentication (2FA) is an extra layer of security that helps protect your account from unauthorized access. In addition to your username and password, 2FA requires you to enter a one-time code sent to your email or phone. This makes it much harder for someone to access your account, even if they know your password.
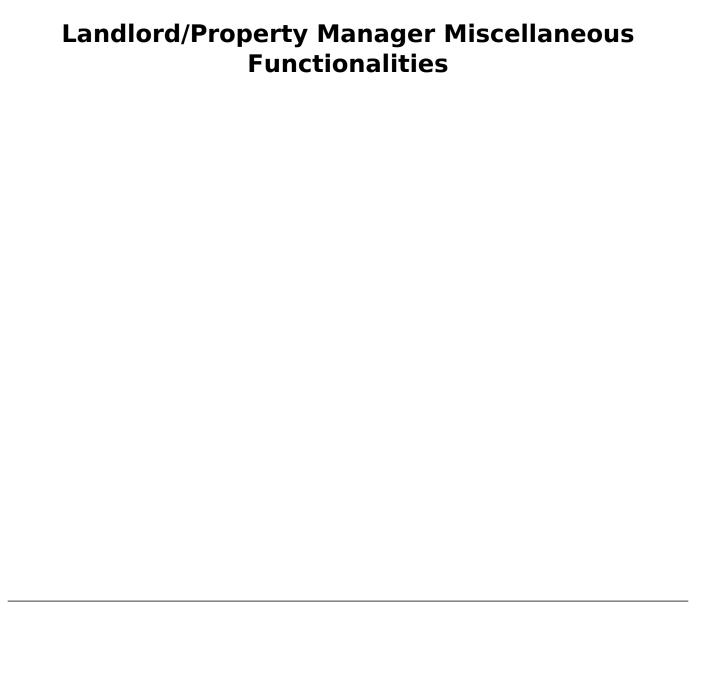

To enable two-factor authentication on your iManageRent account:

1. **Log in to your iManageRent account: Enter your username and password.**

2. **Go to "My Account": Click on your profile icon and select "My Account" from the dropdown menu.**

3. **Navigate to Account Settings: From the sidebar menu, select "Account Administration".**

4. **Enable Two-Factor Authentication: Locate the "Two-Factor Authentication" section and toggle the slider from "No" to "Yes".**

5. **Save Changes: After enabling 2FA, your account will be set up for added security.**

After enabling 2FA:

- **The next time you log in, you'll be prompted to enter a security code sent to your email or phone (depending on your choice).**

- **If you don't receive the email with the code, you can choose to receive the code via phone call or text.**

Below, you'll find screenshots of how to enable two-factor authentication on your iManageRent account:
