

General

Is there an iManageRent app?

An app refers to an application specially designed to be downloaded by a user to a mobile device. The iManageRent land/property manager dashboard is a very powerful tool with many different functionalities, and not all of them can be easily converted to an app. We are currently evaluating what the most desired functionalities are to be included in the app and will create one soon (your ideas and needs for this app will be greatly appreciated; please provide us with your feedback via an email to support@iManageRent.com). Users should not be greatly affected by the app in progress, as after the initial setup, all necessary communication between the system, the user, and tenants is cleverly done through emails, which reduces the need for constant user login.

On the tenant side, we have a mobile-friendly version of the website which has been specially configured to be easily used on mobile devices.
