

General

Is there an iManageRent app?

An app refers to an application especially designed to be downloaded by a user to a mobile device. The iManageRent landlord/property managers dashboard is a very powerful tool with many different functionalities and not all can be easily converted to an app. We are currently evaluating what are the most desired functionalities to include in the app and will create one soon (your ideas/needs for this app will be greatly appreciated, please provide us with your feedback via an email to support@iManageRent.com). Users should not be greatly affected by the app in progress, as after the initial setup all necessary communication between the system, the user and tenants are cleverly done through emails which reduces the need for constant user login.

On the tenant side we have a mobile friendly version of the website which has been specifically configured to be easily used with mobile devices.
